

## ABORTION

*The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:*

- Identify the type of abortion (e.g., spontaneous, induced, tubal, missed, etc.).
- Record instances where all products of conception are not expelled.
- Specify the abortive agent or method used (e.g., abortifacient, laminaria, vacuum, etc.).
- List any associated complications following ectopic or molar pregnancies and abortions (e.g., UTI, iron deficiency anemia, endometritis, acute renal failure, delayed hemorrhage, sepsis, etc.).
- If a delivery occurs, specify the outcome (e.g., single live birth).
