

ATHEROSCLEROSIS OF NON-CORONARY VESSELS

The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:

- Identify the site(s) affected and the laterality (e.g., right leg, bilateral legs, etc.).
- Indicate if the affected vessel is a native or bypass graft.
- List any related complication(s) (e.g., intermittent claudication, rest pain, ulceration, etc.).
