

BURSA DISORDERS

The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:

- Identify the specific condition along with the anatomical location and laterality (e.g., left Baker's cyst, bursal calcium deposits right ankle and foot, right trochanteric bursitis, left ischial bursitis, etc.).
- If the disorder is related to use, overuse, pressure, or a post procedural complication, specify the cause of the disorder (e.g., rappelling, gymnastics, running, etc.).
- Detail additional conditions such as:
 - *Abscess of bursa – identify the causative organism.*
 - *Synovial or bursal cyst – list any rupture.*
 - *Calcium deposits.*
