

CANCER - LUNG

The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:

- Specify the site of all neoplasms (e.g., upper lobe, main bronchus, carina, etc.).
- State the laterality when applicable (i.e., right or left).
- List any related tobacco use, abuse, dependence, or exposure (e.g., second hand, occupational, etc.).
- Indicate the morphology of neoplasms (e.g., benign, carcinoma in situ, malignant primary or secondary site, overlapping, etc.).
