

## CONGENITAL DEFORMITIES OF THE HIP AND FEET

*The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:*

- Identify dislocations, partial dislocations, and unstable hips.
- State the laterality of conditions (i.e., right or left).
- List hip clicks when applicable.
- Differentiate the type of congenital foot disorder (e.g., talipes equinovarus, talipes calcaneovarus, talipes calcaneovalgus, metatarsus varus, pes planus, etc.).
- Clarify congenital versus acquired valgus or varus deformity of the foot.
