

DISORDERS OF THE MALE URINARY SYSTEM

The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:

- Specify erectile dysfunction (ED) as being vasculogenic, drug-induced, post-surgical, or other form.
- Identify the surgical procedure or the underlying condition leading to ED (e.g., psychological or diabetic).
- Detail priapism as being due to trauma, drug(s), underlying disease, or other cause.
- Specify a spermatocele as being congenital, multiple, or single.
- List the vasectomy status when applicable.
