

MENTAL DISORDERS DUE TO PHYSIOLOGIC CONDITIONS

The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:

- Identify associated delirium, amnesic, personality, and behavior disorders that are due to a specific physiological condition (e.g., sun downing, non-psychotic post-traumatic brain syndrome).
- Detail any associated alcohol or psychoactive substance use, abuse, dependence, or past history.
- Provide information regarding any behavior disturbances.
- List any underlying physiological condition (e.g., multiple sclerosis).

- Specify when dementia accompanies any underlying conditions (e.g., Parkinsonism)
