

NEUTROPENIA

The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:

- Identify neutropenia by the underlying cause or type (e.g., congenital, drug-induced, cyclic, etc.).
- Specify the medication causing a secondary neutropenia and the purpose of its use (e.g., Cytosan for a primary malignancy upper-inner quadrant of left breast).
- List any related conditions (e.g., infection).
- Include information regarding any associated fever or mucositis.
