

NON-INFLAMMATORY DISEASES OF FEMALE PELVIC ORGANS

The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:

- State the location of endometriosis (e.g., ovary, fallopian tube, cutaneous scar, etc.).
- List the origin of female infertility (e.g., tubal, uterine, etc.).
 - *Specify the type of infertility procedures (e.g., in vitro, embryo transfer, etc.).*
- Provide information regarding the dysplasia level (i.e., mild (CIN I), moderate (CIN II), or severe (CIN III)).
- State the location of a fistula tract (e.g., vesicovaginal, vagina to small or large intestine, intestinal-genital tract, genital tract to skin, etc.).
- Identify the following:
 - *Any intraoperative or postoperative complications or disorders affecting the genitourinary system (e.g., hemorrhage laceration, etc.).*
 - *Complications associated with artificial insemination (e.g., infection, hyperstimulation of ovaries, etc.).*
- Detail the following:
 - *Infectious agent.*
 - *Underlying disease or condition.*
 - *Psychogenic factors.*
 - *Congenital or malposition of pelvic organs.*
