

THYROID DISEASES

The following are important documentation tips and strategies for this disease/condition as required by the specificity needed in ICD-10:

- Indicate any iodine deficiencies.
 - *Detail the type of congenital iodine-deficiency syndrome (e.g., neurological, myxedematous, mixed)*
 - *State the type of goiter associated with iodine-deficiency thyroid disorders (e.g., diffuse, multinodular)*
- Detail the type of hypothyroidism (e.g., congenital, due to medicine or other substances, post-infectious, atrophy, etc.)
 - *List the presence or absence of a diffuse goiter*
- Report any post-surgical hypothyroidism.
- Specify the presence or absence of a thyrotoxic crisis, storm, or goiter with hyperthyroidism.
- List the acuity of thyroiditis (e.g., acute, subacute, chronic).
